

Chain Lubes

9963 SYNOLEC® Lubricant A fully synthetic oil for high temperature applications leaving no deposits to cause chains to bind, jump the sprocket or break, or conveyor rollers to slide or bind.

- For high temperature chains and conveyors and other high temperature applications where an oil may be used and sealed for life bearings
- Can be sprayed, wiped, or dripped on chains and conveyors
- Dissipates at high temperatures without leaving any deposits
- Cleans up deposits left by petroleum lubricant
- Stable, long-life oil
- Easy to apply with standard equipment
- Cuts costly downtime
- Controls rust and corrosion
- Excellent thermal stability
- Contains no silicone

Technical Information

Product Information 9965 MONOLEC® High Temperature Oven Chain Lubricant Specially formulated oven chain lubricant made from select synthetic base fluids which possess excellent thermal stability and low volatility characteristics. When temperature is sufficiently high, 9965 forms a soft light brown residue that functions as a solid lubricant.

- For oven chains, bakery ovens, kilns
- At extremely high temperatures it forms a soft light brown residue that functions as a solid lubricant
- Energy reduction
- Excellent thermal stability and volatility characteristics
- Improves oxidation stability
- Reduces wear
- Minimal buildup
- High flash point
- Contains MONOLEC®, LE's exclusive wear-reducing additive
