

Heat Transfer Oil

6733 Heat Transfer Oil A synergistic blend of highly refined paraffinic base oil and additives designed to provide low volatility, oxidation resistance and cleanliness in hot oil heat exchange systems. It is formulated to provide long service life and excellent thermal efficiency.

- Made with highly refined paraffinic base oil to improve oxidation stability and volatility
- Formulated with synergistic mix of antioxidants to further improve the oxidation stability of the base oil
- Contains additives to prevent deposits, which allows effective fluid filtration Technical Information
